Bio Magic

A revolutionary Plant growth promoter

Drishti Biotech Private Limited

A End to End Solution Providers in Agriculture Sector

ncreases growth and productivity of Plants by increasing the Chlorophyll

n this world more than 95% food products are produced by using the unique natural photosynthesis process of plants. Three main actors of Photosynthesis are CO2, Sunlight & Chlorophyll, out of this Sunlight & CO2 is available in abundantly in the nature but he third factor Chlorophyll is lacking in plants many times due to several reasons. This results in retarded growth of root & shoots ystem in plant / crop. Out of several major problem is chlorosis. BIOMAGIC is made by studying all the major problems of plant and s developed by using the methods and research of Biotechnology to improve the Chlorophyll contents in plant, which ultimately ncreases the photosynthesis in Crop/ Plants. Main composition of BIOMAGIC is Plant Extracts, Plasticizers, Surfactants and arriers.

Benefits of Using BIOMAGIC :

Increases Chlorophyll contents in plant • Improves photosynthesis process in plants • Helps plants for better intake of all ssential micronutrients from soil • Improves root & shoot development • Improves vegetative & reproductive growth of the lant as & when required • Increases flower development & restricts flower shedding from plants/crops • Improves fruit etting in plants and helps in restricting fruit shedding from plants • Improves fruit/seed size, weights and numbers Improves quality of produce • Improves Oil, protein & carbohydrate contents in Ground nut • Improves intake of nitrogen rom soil to plants • Improves Disease & pest resistance in plants by making the plants stronger • Increases the average ield of crop by 15 to 20%.

low to Use : Dilute BIOMAGIC Paste in separate container in water smoothly by your hand

ROP WISE USE OF BIOMAGIC :

IOMAGIC will be used at the dose of 1 gram per litres of water (300 gram per 300 litres of water is recommended per cres for best results)

Groundnut	First Spray 30 DAS, 2nd and 3rd sprays in 12 to 16 days after first spray
Paddy/ Rice	First spray 15 days after transplanting, and second spray just after weeding operations
Potato	First spray after 15 days of germination, then afterward every 10th day second & third spray to be done
Chilly, Tomato,	First spray before flowering, second & third sprays in 15 days interval.
Brinjal	For hybrid vegetable 5 sprays are recommended
Cotton	Onset of flowering in interval of 15 days 3 sprays. For Hybrids 4 to 5 sprays are recommended
Roses & all Flowers	After Monsoon (Sept) first spray. Afterward in interval of 15 days 2 to 3 sprays
Sugarcane	After germination, after 2 months on 15 days interval 3 to 4 sprays
Grape	After Pruning on set of new shoots first spray to be done. Total 4 to 5 sprays required
Pomegranate, Mango & other fruits	As per growth of plants. Before onset of monsoon in June months in 12 to 16 days intervals 4 to 6 sprays to be done
Wheat	First spray before weeding, then on every 15 days interval 2 additional sprays recommended
Jowar, Bajri, Maize, Rajko etc	15 days after germination, total 3 sprays in 12 to 16 days interval
Tea	After Pruning on set of new shoots first spray to be done. Total 4 to 5 sprays required
Cumin, fennel, Fenugreek etc.	10 days after germination, total 3 sprays in 12 to 16 days interval
Sapota, Lime, banana, etc horticultural crops	As per growth of plants. Before onset of monsoon in June months in 12 to 16 days intervals 4 to 6 sprays to be done

e : Use of Bio-Magic is out of control by company. Hense company is responsible beyond guarantee of equal standard quality of products.

Bio Magic

A Chlorophyll Enhancer

Drishti Biotech Private Limited

End to End Solution Providers in Agriculture Sector

Controls Chlorosis
Enhances Crop
Productivity & Growth

- *A Organic Bio Stimulant*
- *Improves Philosynthesis Activities in plants*
- *Improves disease & Pest resistance in plant*
