DRI ROCKET

(Bio All Sucking pest)

DRI ROCKET is natural product derivative from plant source. DRI ROCKET contain bitter Alkaloids and process derivatives 75% and Emulsifiers & filler to make 100%

DRI ROCKET environmentally friendly and bio degradable pest controller. DRI ROCKET is very effective against sucking pest like white fly, Thrips, Aphids, Mites, Cabbage worm and cotton caterpillar in crops like Cotton, Rice, cumin, wheat, vegetables e.g Brinjal, okra, cucumber, tomato etc, fruits e.g water melon, grapes, mango etc. horticultural crops Tea, Coffee on orchid with sticking agent.

DRI ROCKET is also recommended for organic farming and green usages.

Doses spray DRI ROCKET 15 – 20 ml in 15 ltr of water . 7 – 10 days interval depending upon pest problem and crop size for foliar application. Shake well before use.

Spray DRI ROCKET early in the morning or evening after 4 p.m for better results. Store DRI ROCKET away from direct sunlight and heat from children and animal under lock and key.

Do not use in blooming and fruit let period.

MITLAR

(Bio Larvicide &Miticide)

MITLAR is natural product derivative from plant source. MITLAR contain light yellow botanical extract 80% ,botanical plant extract 15% and surface active agent and solvent QS.

MITLAR is environmentally friendly and bio degradable pest controller with quick acting and slow acting and also control secondary infection .MITLAR control common cabbage worm, cacoons caterpillar, dimond black moth, (larva stage 3),rice leaves roller, rice stem borer, mites etc. On rice, cotton, vegetables e.g b Brinjal, okra, cucumber, tomato etc, fruits e.g water melon, grapes, mango etc. horticultural ,floricultural crops, orchard.

MITLAR is also recommended for organic farming and green usages.

MITLAR is also recommended for organic farming and green usages.

Doses spray MITLAR 15 – 20 ml in 15 ltr of water. 7 – 10 days interval depending upon pest problem and crop size for foliar application. Shake well before use.

Spray MITLAR early in the morning or evening after 4 p.m for better results. Store MITLAR away from direct sunlight and heat from children and animal under lock and key.

Do not use in blooming and fruit let period.

DRI STAR

(BIO FUNGICIDE)

Dri Star is natural product derives from plant source. Dri-Star contains Botanical plant extract 30%, surface active agent 12.5% &water 27 balances solvent.

Dri Star is environment friendly bio fungicide for the control of Downy mildew, powdery mildew, leaf rust, leaf blast in rice, vegetables e.g cucumber, okra, tomato, chilli, fruits crop e.g grapes, water melon, mango etc, horticultural crop.

Dri Star can boost the residence against fungal disease. Dri Star nutrient effect which helps plant grow.Dri Star is also recommended for the organic farming and green house usages.

Doses spray Dri Star 15 – 20 ml in 15 ltr of water . 7 – 10 days interval depending upon fungus problem and crop size for foliar application. Shake well before use.do not mix with either fungicide or alkaline media for spray.

Caution do not spray on roses, strawberries & floricultural crop.

It is better to use as preventive measure make sure to spray evenly on top and bottom of leave.

Do not use in blooming and fruit let period

107 & 108, Sundaram Arcade, Sola Science City Road, Sola, Ahmedabad, Guj 380060 (INDIA)

Clean up

A POWERFUL NATURAL MEALYBUG CONTROLLER

Clean up is natural product derives from plant source. Clean up contains derris extract 10%,botanical plant extract 50%, surface active agent 30% &balance solvent.

Clean up is environment friendly bio pest controller with quick acting & slow acting and important tool to control pest resistance to chemical pesticide for the control of mealy bug, aphid, scale, betteles etc on cotton, vegetables e.g brinjal, tomato, okra fruits e.g grapes water melon, horticultural and floricultural crop & orchads. Clean up is also recommended for organic farming and green house usages.

Doses spray Clean up 15 – 20 ml in 15 ltr of water . 7 – 10 days interval depending upon pest problem and crop size for foliar application. Shake well before use.

Spray Clean up early in the morning or evening after 4 p.m for better results. Store Clean up away from direct sunlight and heat from children and animal under lock and key.

Do not use in blooming and fruit let period.

New AMAZER

(A high end plant growth promoter)

AMAZER is eco-friendly, non-toxic, non-chemical, organic storehouse of naturally occurring growth-promoting substances in a very concentrated form. The Cytokinins, Auxins and Gibbellines with other are in natural form and are readily assimilated which helps to improve cell division and cell enlargement thus resulting in better chlorophyll content and increased production. The constitutes of AMAZER induces faster and vigorous development of root mass which in turn improves the suction of previously unavailable nutrients and other substances from soil for the plant to use. Gibberellins, Enzymes and Hydrolysed protein helps in cell growth and break down of complex molecules in to simpler ones which can be utilized by plants and also improves the soil microbe activity. AMAZER is a natural plant food, which can be applied as a foliar feed, soil application, root dip or seedling dip or as a seed treatment. This type of application enables plant to receive direct benefits when the plant needs them especially at the time of Biomass development, Vegetative growth, C/N ratio differentiation, reproductive stage and Maturity.

Benefits : Useful for all the crops as Plant growth promoter, it increases the root development, nutrient uptake capacity, retention of flowers and fruits, fruits are bigger and shining that produce keeping quality. Very low dose per acre.

Dosage : 3 to 5 ml per 15 lits of water (100 ml per 300 lits of water)

BIO MAGIC

A revolutionary Plant growth promoter - **Increases growth and productivity of Plants by increasing the Chlorophyll and controlling the physiological disorders.**

BIOMAGIC is made by studying all the major problems of plant and is developed by using the methods and research of Biotechnology to improve the Chlorophyll contents in plant, which ultimately increases the photosynthesis in Crop/ Plants. Main composition of BIOMAGIC is Plant Extracts, Plasticizers, Surfactants and carriers. Photosynthesis accounts for up to 90% of the plant growth. Normally efficiency of photosynthesis in plant is only 0.15% as against a potential of 6%. Thus there is tremendous potential for an increase in economic yield by enhancing the rate of photosynthesis. This also improves the corresponding physiological processes like nutrient and water uptake through root development, nutrient utilization efficiency, improved source link relationship, reduced photorespiration losses, promotes cell division and cell expansion. Protein synthesis; root initiation and development, reduces flower and fruit dropping, improves yield and shelf life of fruits and vegetables, helps to withstand stress conditions like drought, frost and attack of insect by improving immunity, improves rate of absorption of fertilizers, in case of weak, the whole plant springs back to its full potency and yielding level etc.

SPECIFICATIONS OF BIO MAGIC Spray GEL FORM:

Description	:	Viscous liquid.
Odour	:	Specific.
Storage stability	:	Minimum 24 months

COMPOSITION

Nicotinic acid	:	24 ppm	N	:	0.103%
Pyridoxine	:	28 ppm	P	:	01.10%
Thiamine	:	18 ppm	K	:	00.06%
Amino acids	:	5234 ppm	Mn	:	12 ppm
Proteins	:	1400 ppm	Cu	:	60 ppm
Carbodyrates	:	9800 ppm	Zn	:	245 ppm
Sachharides	:	9600 ppm			

Since the product is a botanical extraction, the content levels may vary. All the contents are derived from plant sources.

How to Use: Dilute BIOMAGIC Paste in separate container in water smoothly by your
