PGR CHECK LIST

Information to be submitted by manufacturer / marketer of Unregistered plant Growth Regulator to obtain marketing permission

in the state of MAHARASHTRA **Brand Name of Product** **DRI HUME 12**

1. Common Name	Humic Acid 12%
2. Chemical Name	Humic Acid 12%
3. Chemical Composition active Ingrediet %	Humic Acid 12% Humic Acid 12% is a rich organic (carbon) complex aromatic macromolecules with amino acids, sugars, peptides, aliphatic compounds involved in linkages between aromatic rings.
4. Chemical Identity of Adjuvent	Leonardite Adjuvant
5. Manufacturing Process	A solution is formed from adding humate to water under constant agitation. Sodium Bicarbonate is added to the solution, resulting in a reaction allowing silica to precipitate out of the solution. The resulting solution is about 12% humic acid. Additional water is added to the solution along with a series of crude protein sources, including fish protein, blood extract, and feather meal
6. Method of Analysis	Leonardite materials. Technical demand - Test method - The method:Capability method. - Method abstract. 2. Reagent. - Normal potassium dichromate solution. + Potassium dichromate solution. + Vitriol. + 1,10-Phenanthroline monohydrate indicator. + Ferrous ammonium sulphate normal solution. 2.1.3 Process of analysis. - Oxidize. / Titration. = Analyse the result. = Allowed error.
7. Attach Literaures on	
a. Chmeistry	The typical humate molecule contains free and bound phenolic and carboxylic acid groups, quinone structures and nitrogen and oxygen as bridge units between aromatic structures. Humates are colloidal in nature. In certain respects they behave like clay minerals.
b. Bioefficacy	Improved water holding and nutrient availability, Neutralize Salts, Hormonal Activity, Biochemical and physiological process, Antioxidant Activity, Photosynthesis
c. Toxicity	No Oral LD 50 nor LC 50 has been established, No Skin Toxicity, Creates Irritation on Eye contact No Chronic effect Nor another side effects reported till date
8. Mode of Action	Humic Acid -12 is formulated to increase soil's ability to retain nutrients and improve water-holding capacity. It is suitable for use with most irrigation systems. It may be used for foliar or soil application in boomspray or sprinkler/overhead irrigation or for direct soil application in 12 is a high concentration liquid soil conditioner, which must be diluted with water before application
9.. Recommendation on Crops	All Crops
10. Registration Status in other Countries	All over the world - Free to use in Agriculture purpose
11. Nature of Origin	Plant Origin speify
12. Class of Plant Growth Regula	Unclassiffied PGR speify

Products are developed through continuous Research and field testing on bioefficacy and result in field situation. As an ethics of business it should be beneficial to the clients. As afundamental right to trade any commodity / product suitable for clients requirement is valid in any part of India. We assure the consistent quality of product in each batch produced by us.
